

HealSafe Curtain Rail System

Curtains frustrated ligature-resistance efforts for many years. Designs with U-shaped tracks are disabled by insertion of objects, possibly even allowing a ligature-attachment point. Individual pull-away curtain carriers support small amounts of weight, but they hold a lot of weight if many are pulled on together.

HealSafe Interiors of Sweden solved these problems with its patented rail and carrier system. The extruded aluminum rail has no cavities. Sloped end-caps guard pulling on against wedging at the ends. The pull-away plastic carriers have a unique design that keeps them from being aligned when grouped together. This negates attempts to hold substantial weight by pulling on many of them at once.

Specifications

- **Rails and End Caps:**
 - Extruded aluminum, white powder coat finish
 - Available in wall-mount, ceiling-mount, and 90 degree corners
- **Carriers:** Plastic, 2 types for attachment to curtains via hooks or holes
- **Installation:**
 - Pre-drilled mounting holes on rails, plus 2 holes per end-cap
 - Requires flat-head security fasteners (not included)
 - Carriers easily snap on; no removal of parts required to re-hang curtain

Wall-Mount

Ceiling-Mount
