

# J-trac™ curtain rail - ceiling mounted

## MOUNTING INSTRUCTIONS

*J-trac™ curtain rail, ceiling mounted* offers the possibility to design an interior with curtain in challenging environments. It is designed to resist suicidal acts. When abnormal weight is applied the curtain and runners release from the rail, while rail parts stay securely fixed to the ceiling and allow no further fixation of any ligature.

## UNPACKING

- Carefully open the carton and examine that no parts have been damaged during the transportation.
- Check package content against the parts list.

Mounting parts

J-trac™ curtain rail, ceiling mounted  
- JT 250

J-trac™ end cap, ceiling - JT 253, 265

J-trac™ runner - JT 255

Security screw, 50 mm, countersunk,  
white - JT 283 (if ordered from HealSafe  
Interior)

## PREPARATION

- Mounting should be done so that the rail fits tight against the surface it is mounted against. Uneven surfaces should be avoided. Make sure that the rail is not mounted above holes/cavities or objects which could cause an unforeseen fastening behind the rail or through a combination of cavities or protruding objects. - Figure 1. ⚠
- Before cutting the rail to final measurement assure no countersunk holes are partially covered by the end cap. No part of a countersunk hole should be covered by the end cap. - Figure 2. ⚠
- Make sure the distance between the rail and the wall/window is enough for the curtain to hang freely.
- The rail should preferably be mounted to a massive ceiling. For ensured optimal security the rail shall be mounted to a ceiling without gaps or suspended grid system.

Figure 1

Figure 2

**WARNING** If not mounted securely to the ceiling, or not following the above instructions, or taking precautions to mount the rail properly can result in severe bodily injury or even death.

## MOUNTING

- Make sure that the rail is mounted with the flat side of the profile facing the wall/window, (same side as the countersunk holes). - *Figure 3.* ⚠
- Fit the rail with countersunk security screws, secure each hole has a screw. The holes fit a screw diameter 5 mm, 10 mm head. Ensure the screws does not protrude.
- Two or more rails should not in any way be mounted parallel and adjacent to each other, it may create risk of fastening an object between them. - *Figure 4.* ⚠

Figure 3

Figure 4

## RUNNERS

- Snap the runner to the rail with its curved side to the curved side of the rail. - *Figure 5.*
- 12 runners bound together release at a maximum load of 4 kg/9 pounds. Appropriate number of runners per curtain is related to curtain size and weight. Please consult with HealSafe Interior® representative for advice. ⚠

Figure 5

## CHECK BEFORE USE

- After installation ensure that rail fits tight to the surface and check that no objects, wire, or string can be inserted between the rail and the ceiling. ⚠
- Make sure the runners move smoothly on the mounted rail.
